INTRODUCTION

Companies that have large lists of mobile numbers keep them for more than 1 year and these lists become quickly outdated. According to statistics, most mobile users change their mobile number frequently, so after 8 months many mobile numbers are still in the company's database but they are not valid any more.

By sending SMS to an invalid mobile number your company wastes money to send SMS to a customer who will never respond. With this service you can clear-out your database and you can have an updated list with 100% working mobile numbers with up to one sixth (1/6) of the cost of SMS (per mobile number).

TECHNICAL SPECIFICATIONS

To offer the HLR Lookup Service, we connect to four high quality gateways through SS7 and other proprietary APIs and we can offer you the following features:

GW Features (High Quality):

- Direct SS7 Connection
- Speed up to 75 lookups/sec
- Response time <1sec
- Covers 512 operators in 145 countries
- Location Information available (MSC)
- Shows Failed MSISDNs
