The Mobile World – Introduction

Today's life is mobile. Literally, people spend a considerable amount of their daytime on the way and use their mobile phones more than ever.

In 2014 there were more than 6 billion subscriptions. By early 2015, there will be more mobile phone subscribers than the world's population. With increasing penetration of mobile phones to the most rural areas, mobile networks cover more than 90% of the world's population. Consumers are always on the move and expect to use services and products on the go. This combined with the fact that mobile phone is the most personal digital device there is, make mobile a great B2C communication channel.

There are 1 billion smartphones and there are 5 billion feature phones. All these phones have built-in SMS capability. Mobile apps and smartphones are the latest trend in the industry, offering rich functionality, but limiting the potential marketplace. Availability, affordability and ubiquity make the mobile phone SMS capability an essential platform for global enterprise services.

A person wearing a brown uniform is holding a stack of cardboard boxes. A handheld scanner is visible at the bottom of the frame, scanning the boxes. The background is slightly blurred, showing what appears to be a warehouse or shipping area.

The Mobile World – Introduction

With the internet and mobile revolution, expectations are shifting towards the mobile phone. Many globally established businesses now choose SMS as an important channel when planning their mobile strategy. The mobile phone has become the new “must have” for any serious “innovative” service.
